

Maxim Gvazava

iOS Developer

Tula | remote / hybrid | +7 (999) 782-26-55 | maximgv@icloud.com | t.me/maximgv3 | github.com/maximgv3

Key Skills

Swift SwiftUI UIKit
MVVM/MVP Swift Concurrency
Combine URLSession REST API
Core Data Swift Testing
Unit/UI tests AVFoundation Git

Additional Education

Yandex Practicum
Advanced iOS Developer, 2026

Languages

Russian - native
English - B1

Work Format

Full-time / internship / project-based work
Remote or hybrid

iOS Developer focused on SwiftUI/UIKit and building apps with clear business logic. Completed the Yandex Practicum iOS Developer program; interested in the Apple ecosystem, UX quality and maintainable architecture. In projects, I focus on clear user flows and applied business logic, using real warehouse experience as domain knowledge.

Projects

WMS - mobile app for warehouse operations

SwiftUI, MVVM, Observation (@Observable), AVFoundation, mock service layer, Swift Testing
Implemented the picking module: task loading, current location screen, barcode scanning, location validation, switching between items and task completion. The project is based on real warehouse scenarios and is currently in development.
github.com/maximgv3/WMS

FakeNFT - team project based on a technical specification

SwiftUI, MVVM, async/await, URLSession
Implemented the Profile epic: profile screen, data editing and navigation.
Worked in a team Git workflow: pull requests and code review.

Other projects

- **ImageFeed** - UIKit, OAuth, WebKit; authentication and image feed.
- **Trains** - SwiftUI, Combine; UI and schedule display logic.
- **Tracker** - UIKit, Core Data; tracker and category storage, updates via FRC.
- **MovieQuiz** - UIKit, MVP, Unit/UI Testing; quiz, results calculation and statistics.

Practical Experience

Wildberries & Russ - Warehouse Operations Operator

August 2023 - present

- Order picking, product placement and inventory; working with handheld scanners and digital warehouse accounting systems under high load.
- Use this experience as domain knowledge for the WMS project: I understand real limitations, common errors and user scenarios in warehouse operations.
